

Training

Training Portfolio

Aimed mainly at orienting the client with the features, use and added value of transport automation, training sessions provided by ISFP experts are designed within the SPS framework and infrastructure. Our training service delivers open enrollment classes that are based on rotating topics and taught in a comfortable, state-of-the-art classroom, structured around short lectures, interspersed with hand-on exercises and group discussions. Final tests are given to validate users' learning experience at the end of each course. To maximize the effectiveness of our training sessions, we limit the number of participants, thereby giving students ready access to individualized attention.

Sessions Focuses on:

- Personnel training institutions on essential uses of information systems
- Specialized training on the use of applications
- Specialized training on the management of information systems.

Workshops

- ISFP is organizing a workshop that will take place in APA discussing "Electronic Data Interchange".
- ISFP has organized many workshops that took places in Lybia discussing "Electronic Management in Ports".
- ISFP has organized many Workshops that took places in PTI discussing "Electronic Management in Ports".
